

Job Title: Python Developer (Specialized in AI and Web Applications)

Location: Remote/On-site

About Us:

We are a forward-thinking organization looking for a Python Developer with expertise in building innovative AI-powered applications and web-based solutions.

Responsibilities:

- Develop and maintain Python-based applications with a focus on automation and optimization.
- Design and implement intelligent systems using frameworks like Hugging Face Transformers and PyTorch.
- Build and deploy web applications, including GST Configuration tools, leveraging Frappe Framework and ERPNext.
- Extract, process, and analyze data from diverse sources using tools like Scrapy, BeautifulSoup, and cloud platforms such as GCP.
- Perform data analytics and visualization to deliver actionable insights using BigQuery and Looker Studio.

Qualifications:

- Strong proficiency in Python, MySQL, HTML, CSS, and JavaScript.
- Experience in frameworks and libraries like Frappe, Scrapy, Hugging Face, and PyTorch.
- Familiarity with cloud technologies and data pipeline tools (e.g., GCP Storage, Mage Data Pipeline).
- Proven ability to work with ERP systems and automate tax compliance processes.
- Bachelor's degree in Computer Science and Artificial Intelligence or a related field.

Why Join Us?

- Opportunity to work on innovative projects like GST Configuration App and Intelligent Medical Assistant.
- A collaborative environment that values skill development and cutting-edge technologies.
- Flexible working options with a focus on results-driven success.

How to Apply:

If you are passionate about solving real-world problems through technology, we encourage you to apply.
